

PBL Project Main Page

Our project is responsible for delivering an end-product that creates a single span of an image that is made by overlapping images from two projects. The two component images have been processed using image processing techniques (which includes gamma correction, alpha blending, and modified intensity) to appropriate the look of the final image. Our team is divided into the project manager, leader, oxygen generator, and sub-teams dealing with wiki management, coding, commenting, and UML designing. x
