Description			
Optional) The Doxygen Commenters team can automate the process of generating and updating documentation. Tasks include:			
Set Up Automation Tools:			
Integrate Doxygen with a build automation tool (e.g., Makefile, CMake, or a CI/CD pipeline like Jenkins, GitLab CI, or GitHub Actions).			
Automate Documentation Generation:			
Configure the automation tool to run Doxygen automatically whenever changes are made to the codebase (e.g., on commit, pull request, or nightly builds).			
Push to Documentation Hosting:			
Automate the deployment of the generated documentation to a hosting platform (e.g., GitHub Pages, AWS, or an internal server).
